

Carboclean Gel 100 for Cleaning of Freshwater Tanks

We hereby confirm that Carboclean Gel 100 can be used for cleaning of freshwater tanks coated with epoxy-based linings.

Application procedures for use of Carboclean Gel 100 must be followed and the cleaning process must be finish with hot freshwater rinsing. Water temperature should be 60 °C and all residual dirt and Carboclean Gel 100 must be removed.

A final visual inspection to the coated surface must be performed before filling the tank again with freshwater.
